

A stone grinding mill newly planted by the Homib Construction Company in Aligidir has begun rendering services, according to Mr. Kidane Woldu, manager of the company.

Aligidir, 11 July 2010 – A stone grinding mill newly planted by the Homib Construction Company in Aligidir has begun rendering services, according to Mr. Kidane Woldu, manager of the company.

He told ERINA that the installed machine would produce 120 tonnes per hour and is the biggest of its kind in the country.

Pointing out that they used to travel over 300 km. to get gravel and make unnecessary expenses, Mr. Kidane said that the company is now able to benefit from the newly planted machine and help other construction companies as well.

The head of the project in the area, Mr. Negash Filli said that the area in which the machine is installed is rich in rocks and would enable the plant to make use of it for over 40 years.
